Technical Skills

- Rapid Iterative Design
- Design for Assembly & Manufacturing
- GD&T Drafting
- Testing and DAQ
- Statistical Analysis
- Prototyping
- Solar Power Design
- Data Analysis & Visualization
- Languages: Python, SQL, TypeScript, JS, HTML, CSS
- Frameworks: Playwright, Node.js
- CAD: PTC Creo, SolidWorks
- PLM: Windchill, GitHub, Jira
- Tools: Salesforce, MATLAB, Excel, PowerPoint, Word

Education

BS Mechanical Engineering
Cedarville University

Certifications

Data Scientist: Analytics
Codecademy

Soft Skills

- Client Handling
- Remote Team Communication
- Product Development
- Mechanical Design
- Self Driven Learning
- Independent Problem Solving

Kaileb O'Neil

Mechanical Engineer | Data Scientist

Mechanical engineer with a diverse background in problem-solving, version control, iterative design, and process optimization in both the physical and software worlds. My drive to proactively acquire the skills needed to overcome new challenges or optimize current systems, has allowed me to succeed in a variety of environments. Most recently I have expanded my skillset, earning a data analytics certification, and I am excited about my next multi-discipline challenge.

Experience

Data Scientist: Analytics Career Path

Codecademy I Remote - Biddeford, ME

SEPT 2023 - PRESENT

- Automates data-driven testing, API controlled inboxes, and Git version control in portfolio projects.
- Creates data scraping pipelines for automated testing with JavaScript in Node.js and Playwright.
- Programs in Python, Pandas, SQL, and Tableau to perform hypothesis testing, data visualization and data cleaning.

Data Entry Specialist

Allegiant Care I Remote - Biddeford, ME

NOV 2024 - MAR 2025

- Facilitated smooth member enrollment, transferring data from portal to company database during peak enrollment.
- Developed more efficient and robust methods for formatting company documentation.

Associate Photovoltaic Designer

Sunrun I Remote - San Francisco, CA

APR 2023 - SEPT 2023

- Increased productivity of myself and team by identifying tedious and repetitive tasks in design process, creating custom Excel sheets to automate the task and sharing them with my team.
- Maximized production of residential solar power systems in 3D shade modeling software.
- Scoped electrical and structural work required to meet building codes before every install.

Off-Grid Van Designer & Builder

Personal Project I Charleston, SC

DEC 2021 - APR 2023

- Researched and created custom van layouts in Sketchup to meet design and budget requirements.
- Built an off-grid mobile home in a RAM Promaster that was move-in ready in 3 months.
- Constructed all custom wood cabinetry, walls, ceiling and floor for irregular geometry of van.
- Designed 400 W solar system to power a 300 amp hr Li battery bank and 1500 W inverter.
- Installed a 2-stage water filtration and propane system to heat the van, water and fuel stove top.

Mechanical Designer & Drafter

Remote Freelance I Charleston, SC

JUL 2019 - DEC 2021

- Led prototyping and thermal testing behind DogSpot's new model for their rentable, climate-controlled dog house. I built prototypes, designed tests, sourced and calibrated DAQ equipment, conducted tests and reduced results into final report.
- Solved cooling failures of DogSpot's old models with simple sheet metal parts that could be rolled out in weeks and prevent DogSpot from closing many of their fielded models in the summer heat.
- Researched smart parking meter market competition and drafted technical design specifications.
- Modeled and drafted cabinetry for custom National Parks teleconferencing kiosk in PTC Creo.
- Presented iterative designs and drawings in remote conferences to other sub teams.
- Managed version control and project tasks with Windchill and Jira.
- Handled communication with out-of-house manufacturing, sourcing products .
- Led design and built of a wooden deck to conceal a client's cracked concrete patio.
- Communicated with client input to ensure layout, materials and finish meet their expectations.
- Produced 3D CAD modeling and 2D drafting design modifications and revision control.

Projects

Hacker News Automated Testing Suite

Typescript | Playwright | Node.js | Mailslurp

MAR 2025 - MAR 2025

- Designed automated data-driven tests to validate the content, site navigation, and user account management systems were displaying and working correctly
- Used Page Object Model (POM) structures implemented with Playwright's custom fixtures to cleanly manage site interaction code and improve test code readability

Portland Airbnb Data Analysis

Python | Pandas | Jupyter Notebooks | Data visualization

JUN 2025 - PRESENT

- Designed automated data-driven tests to validate the content, site navigation, and user account management systems were displaying and working correctly
